

Final Project Semester 1

Scope

Organization: ג'בארין אבו רפיק

Project name: BuildTech

1. Introduction

1.1 Information Sources:

In order to collect all the data needed to understand the Organization and its environment we did an interview with 'Rafeek' he's a contractor and the owner of a building repair company. The interview based in merging between Bottom-up and Top-down techniques. The questions we asked were semi structured which means we determined some of the questions before the interview, and the rest came out during the interview.

We also collected some of the documents needed beginning with a call to the manager for getting a project bid until the project is done.

1.2 Purpose:

We want to implement a system that manages the workflow for an independent contractor who has a company with 3 managers, 9 employees and secretary. There's a need for a system in this business field.

We find a lot of problems after the interview with the contractor:

- He uses excel for saving all the data of his business like employees, cars, projects data...
- He misses the date of his insurance and test of the cars and trucks he has, and also he wants to manage who is holding each car in the working field and who can .

- In order to know when each payment was received and by who, he needs to check with the secretary and check his bank account to know and this is a serious problem for him.
- Each project is divided to little missions and Each part will receive a percentage payment, so in order to know the profit from the whole project he need to calculate the expenses form the revenue.

The system will analysis and include the following data:

1. The contractor has many cars, trucks, drag trucks and mini gragger, and there's a drivers for each one has insurance, test and renew license.
1. Updating the owner about the project flow, by showing the manager the current development for each project.
2. All data saved securely, by defining all the entities in the system, there attributes and there relations.
3. Updating the owner about all payments needed, soon payments, customers payments for each stage in the project. (workers revenue)
4. Managing the Material Storage by Updating the Owner about current Material quantity and if there is any need to Order new quantity from the providers.

All requirements will be detailed later.

1.2 Customers:

- customers find us by:
- Friends of friends. ? (network of connections) - Architect.
- Construction inspector.
- customers also can contact the organization in the order of starting a:
- private projects - house, gardens and any private site projects.
- Public projects - such as Doorments, schools, medical centers and more...

1.3 Market Survey

After a deep searching and exploring for systems that manages a Huge construction projects, No system was founded that matches the Owner and the Business

requirements. That's why the need was born for Operation a Management System for the Organization.

Projects:

projects divided by 3 types:

1. Renovation projects.
2. Building projects.
3. Maintenance and Repair of Older Buildings.

Each project has 3 or more stages. These stages depend on each specific project and its requirements.

2. User research:

2.1 System Main users:

The App is basically for the use of the Owner Rafeek, secretary, Team Manager.

2.2 USE CASES

1. For starting a new project.
2. For vehicles' management.
3. For management of checks.

3. Users Story

1. As an administrator, I need a system to manage my business; the employees, the cars we own, the revenues, the expenses and the suppliers that I work with. I need a database beside the system to hold all the data up to date.
I need to be able to generate reports immediately and easily.
I want to get alerts whenever an assurance of a car is close to finish, also I want to know all the details about the cars' maintenance.
I want it to be clear to me about each project how much the incomes, outcomes and the net profit.
2. As a secretary I need from the system to add to my work, in other words to be easier to deal with more than the excel, to save me time, for example in calculating the workers' salaries, production of weekly or monthly reports.

3. As a team leader, I need to enter into the system the employees who work under me on the site on a daily basis, also to enter for each worker how many additional hours he worked(if he did).

4. Persona

"It's the time to merge technology with our work"

Occupation: Building Administrator

Age: 32

Status: Married

Rafeek Jbareen

Goals:

- To prosper and develop his business.
- To manage his business in the most efficient way.

Motivations:

- Rafeek is ambitious and very serious in his work.
- Has reached to a very advanced place in his business in relation to his age.

Hobbies:

Horse riding, Interested in cars and tractors.

Technological knowledge:

Skilled knowledge of mobile phones and applications.

Professional Experience
